Page-Specific Optimizations:

High-Priority Pages:

Homepage (<https://www.nmkr.io>):

Specific recommendations: Reduce image sizes, implement lazy loading, and compress scripts to improve load time. Enhance mobile responsiveness with a mobile-first design approach.

Services Page (<https://www.nmkr.io/services>):

Specific recommendations: Add H1 and H2 tags to improve structure. Optimize meta tags with relevant keywords and descriptions.

Content Gaps:

Identified gaps: Lack of detailed service descriptions and case studies.

Improvement suggestions: Expand content on service offerings, include customer testimonials, and add case studies to demonstrate success stories.

Structure Enhancements:

Navigation improvements: Simplify menu structure for better user experience and faster navigation.

Internal linking strategies: Increase internal links to related services and blog content to improve site architecture and user flow.

Implementation Timeline:

- Month 1: Focus on reducing load time and improving mobile optimization. Implement image compression, script minification, and mobile-friendly design changes.
- Month 2: Enhance content structure by adding heading tags and optimizing meta descriptions for all pages.
- Month 3: Expand content to fill identified gaps and improve internal linking strategies. Conduct a review of link distribution and explore opportunities to acquire links from higher authority domains.
